AE-TRANSECT - WP3 Task 3.2 Metadata Repository

This page provides access to metadata for the two datasets generated under Task 3.2 of the AE-TRANSECT project, led by ÖMKi. The datasets were produced through the project's Annual Learning Cycles with the 11 Innovation Hubs and supported the monitoring and evaluation of their development and contribution to agroecological transformation. The metadata provide information on the scope, methodology, structure and content of the datasets, making the results discoverable while respecting protection and confidentiality requirements.

Project title: Trans-disciplinary approaches for systemic economic, ecological and climate change transitions Horizon Europe
Grant agreement number: 101060816
Call: HORIZON-CL6-2021-CLIMATE-01
Work programme topic: HORIZON-CL6-2021-CLIMATE-01-05 - Agroecological approaches for climate change mitigation, resilient agricultural production and enhanced biodiversity
Type of action: Research and Innovation Action (RIA)
Duration of the project: 48 months, from 01/09/2022 to 31/08/2026

1. Dataset: AE-TRANSECT Innovation Hub Learning History Dataset

Project: Agroecology-TRANSECT
Grant agreement number: 101060816
Dataset title: AE-TRANSECT Innovation Hub Learning History datasets
Dataset ID in Data Management Plan: WP3.2_IH_learnHistory
Resource type: Dataset consisting of semi-quantitative Learning History data
File formats: DOCX
Number of files: 44 files
Data collection coverage: 2022–2026, covering the 11 Agroecology-TRANSECT Innovation Hubs across four Annual Learning Cycles.
Description of the dataset: The dataset contains semi-quantitative Learning History (LH) data developed with the 11 Innovation Hubs (IHs) participating in AE-TRANSECT in the context of Tasks 3.1 and 3.2. The LHs formed the reflective component of the project's iterative monitoring and learning process and were used to understand how significant activities and developments within the IHs resulted in particular effects, contributed to progress towards IH objectives and supported wider agroecological transformation. The repeated application of the LH enabled changes and learning processes within and across the IHs to be followed over time and supported comparative analysis across the 11 IHs. The LH exercise was repeated four times during the project, resulting in four successive subdatasets (#6.1, #6.2, #6.3 and #6.4).

Description of content and files included: LH records from the 11 Agroecology-TRANSECT IHs, containing information on the IH actor network and its development; most significant events, including their action type, effects, perceived importance and whether effects were anticipated; and reflections on enablers, barriers, learning needs, transformation goals, understanding of agroecology and other lessons learned.
Keywords: agroecology; Innovation Hubs; Learning History; monitoring and learning; co-innovation; multi-actor collaboration; significant events; enablers and barriers; agroecological transition; reflexive learning
Access status and conditions: Restricted / non-public. The dataset is stored in ÖMKi's restricted institutional storage and is not publicly accessible because it contains personal data relating to IH participants and contributors. Access is restricted to protect confidentiality and ensure compliance with GDPR and the project's data protection provisions.
Creators: Hungarian Research Institute of Organic Agriculture (ÖMKi); Wageningen Research (WR)
Data contributors: The 11 Agroecology-TRANSECT IH teams
Dataset version: 1.0
Date of deposit: 31 August 2026
Metadata license: CC0 1.0 Universal (CC0 1.0) Public Domain Dedication.
Responsible organisation / Dataset owner: ÖMKi
Contact person: Dóra Drexler, ÖMKi dora.drexler@biokutatas.hu

2. Dataset: AE-TRANSECT Innovation Hub Action Plan Dataset

Project: Agroecology-TRANSECT
Grant agreement number: 101060816
Dataset title: AE-TRANSECT Innovation Hub Action Plan dataset
Dataset ID in Data Management Plan: WP3.2_IH_actionPlan
Resource type: Dataset consisting of semi-quantitative Action Plan data
Data collection coverage: 2022–2026, covering the 11 Agroecology-TRANSECT Innovation Hubs across four Annual Learning Cycles.
File formats: XLSX
Number of files: 44 files
Description of the dataset: The dataset contains semi-quantitative Action Plan (AP) data developed by the 11 Innovation Hubs (IHs) participating in AE-TRANSECT in the context of Tasks 3.1 and 3.2. The APs documented the main actions planned by the IHs for the following six months and formed the forward-looking component of the project's iterative monitoring, learning and planning process. They supported the IHs in translating reflection and learning into planned activities and subsequent steps towards their objectives. The AP exercise was repeated four times during the project, resulting in four successive subdatasets (#7.0, #7.1, #7.2 and #7.3).

Description of content and files included: AP records from the 11 Agroecology-TRANSECT IHs, containing, for each planned action, the date, IH objective(s) addressed, description of the action, action lead and team, relations with external initiatives or activities, expected results, anticipated learning and potential problems and mitigation measures, where applicable, and relations with other Agroecology-TRANSECT IHs, WPs or tasks.

Keywords: agroecology; Innovation Hubs; Action Plans; monitoring and learning; co-innovation; multi-actor collaboration; action planning; agroecological transition; expected outcomes;

Access status and conditions: Restricted / non-public. The dataset is stored in ÖMKi's restricted institutional storage and is not publicly accessible because it contains personal data relating to IH participants and contributors. Access is restricted to protect confidentiality and ensure compliance with GDPR and the project's data protection provisions.
